

# DADDY PETE'S PLANTING MIX PLUS PERMATILL®

Daddy Pete's Planting Mix Plus PermaTill® is great for soil conditioning and for discouraging vole activity. This organic mix consists of Daddy Pete's Composted Cow Manure, premium aged pine bark fines, and Permatill.

PermaTill® is a unique product produced from a special slate found in Gold Hill, North Carolina. PermaTill® is the first great man made product in the United States. PermaTill® discourages underground vole from feeding on the roots and bulbs of many landscape plants. It has a low absorbency (3%), therefore, it retains air and doesn't absorb moisture away from plants like other amendments. Roots will penetrate PermaTill® and not be restricted by it. PermaTill® is a product that absorbs water, air and nutrients grow freely in and through the thermal granules. PermaTill® permanently offers superior drainage and aeration, and has a nutrient holding and exchanging ability.
